

TheVaccinator: for total immunization management

Comprehensive vaccine administration is a critical component of a successful immunization program.

TheVaccinator is a complete application for all aspects of vaccine and immunization management, including automated electronic data submission to Immunization Registries.

TheVaccinator manages all aspects of an immunization program:

1. Facility management

- Facility information
- Facility's state registry ID
- State registry ID for reporting

2. User management and assigned permissions

- Administrator(s)—full access
- Physician(s)—Provider and/or Giver
- Nurse(s)—Provider and/or Giver
- Front desk—Reporting functions

3. Vaccine management

- CDC-defined
- Custom-defined
- Vaccine components
- CVX codes, CPT codes
- Manufacturers and MVX codes
- Immunization schedules
- Default vaccine set for facility
- Link to most current CDC literature (Vaccine Information Statement)

4. Inventory management

- Manufacturers
- Trade names
- Use and waste audits
- Lot #s, expiry dates, NDC codes
- Inventories private and public

5. Immunization management

- Immunization program customized for each patient
- Immunization recording coordinated with program and active inventories

6. Patient management

- Demographic data
- VFC status
- Next of kin
- Medicare/Medicaid
- Import HL7-ADT records (v. 2.5.1)
- Reports

7. Reports

- Facility
 - Vaccine inventories and usage
 - Reports by givers
 - Billing reports
 - Patient planning and history reports
- Vaccine and immunization management
 - List of patients dosed from specific lots
 - Registry reporting
 - VAERS reporting
- Patient
 - Permission form
 - Immunization schedule
 - Immunization record

Key Benefits of TheVaccinator Immunization Management:

Simplifies the process of documentation

Provides immunization schedules and vaccine inventory control

Handles electronic reporting to Immunization Registries
